

STEAG Technischer Service GmbH

Service provider for the energy sector, for local authorities, and for industry at large

Having been involved in electricity and heat production for more than 80 years, STEAG can draw on extensive expertise for power generation plant and equipment, electricity networks and industrial plants. The plants serviced range from coal-fired and combined cycle power plants, through waste-to-energy, biomass, biogas, wind and refinery power plants, to industrial plants, district heat supply systems and electricity networks. We are pleased to make our know-how gained in years of operation and constant optimization of our own plants available for your operations.
